

Accessible Article Template

James M. Murray

April 7, 2026

Abstract

This is a demonstration of an accessible article template using the `accessarticle` class.

1 Introduction

This accessible article template is designed to help authors create documents that comply with UA-1 PDF accessibility standards. It includes features for tagging content, providing alternative text for images, and properly marking up mathematical expressions.

Documents created with the `accessarticle` document class must be built with `lualatex`. Tex engines such as `pdflatex` or `xelatex` will not work properly with the accessibility features and will result in build errors.

2 Including Graphics

2.1 Accessible Graphics with Alt Text

The `includegraphics` environment is redefined to require alternative text for accessibility. Here is an example:

2.2 Purely Decorative Graphics

Use the new `decographics` command for purely decorative images that should be ignored by assistive technologies and therefore do not use alternative text:

3 Equations

The `accmath` environment provides display math with alt text for accessibility.

$$s = \sqrt{\frac{\sum_{i=1}^n x_i^2 - \frac{1}{n} \left(\sum_{i=1}^n x_i \right)^2}{n-1}}$$

The `acceqn` environment is a numbered equation with alt text:

$$e^{i\pi} + 1 = 0 \tag{1}$$

4 Lists

- This is an item in a bulleted list.
 - Lists are tagged properly for accessibility.
1. This is an item in a numbered list.
 2. Numbered lists are also tagged properly for accessibility.

5 Conclusion

This document class is intended to be simple with minimal additional features so that $\text{\LaTeX}$ articles can meet accessibility standards.
